

SERIES 3W & 4W MULTI-PORT BALL VALVE OPTIONS & ACCESSORIES

The 3W and 4W Series multiport ball valves have (4) seats, therefore are true multiple position flow and pressure control devices, providing shut-off capability between any and all ports up to pressure rating of 1000PSIG. As such, there are actually (4) operating handle positions. We expect most 3W & 4W valves to be automated, thus the CF8M handle and 316SS stop plate are optional.

1/4" to 2" size 3W & 4W multiport ball valves can be fitted with Quadrant's C-Series pneumatic actuators in either double-acting or spring-return (fail safe) configurations. These actuators can be equipped with solenoid valves, breather blocks, limit switches, declutchable overrides, positioners and other options and accessories. Direct mount capability of 3W & 4W provides significant cost savings.
